

Energy & Atmosphere

Smart Release Technology products are designed to optimize the efficiency of HVAC systems.

[Points Possible](#) - Prerequisite

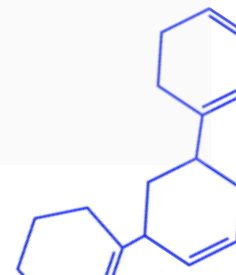

Innovation

Smart Release Technology products offer superior environmental benefits when compared to traditional liquid cooling water chemistry programs.

- Personnel Safety - Coated tablets and membranes completely isolate end users from active chemistry. Use with peace of mind that you won't have any chemical spills causing hazardous working or environmental conditions.
- Low Toxicity - Many liquid chemistries require stabilizers to keep raw materials in solution. Smart Release products contain at least 97% active as salts, which are fully dissolvable, eliminating discharge of harmful chemicals into waterways.
- Convenience - Containment areas are not required for storage or operation. Also, you'll eliminate the need to triple rinse drums and pails.
- Easy to Dispose - All exhausted tablets can be disposed of with normal solid waste and trash. All materials are non-toxic and include no heavy metals.
- Non-Corrosive - Smart Release products contain no caustic in our formulas.
- CO2 Emissions - Smart Release products are shipped and delivered in recyclable cardboard boxes with highly active concentrated products, reducing the shipping weight and, thus, lowering CO2 emissions.

Water Efficiency

Smart Release Solid Cooling Water Technology products protect facility assets by controlling scale, corrosion and biofouling to ensure efficiency of systems is optimized.

[Points Possible](#) - 2-4

Materials & Resources

Smart Release Technology products reduce facility waste, as you will no longer have to triple rinse and dispose of hazardous liquid chemical drums and pails.

[Credit Category](#) - Facility Maintenance and Renovation Policy

[Points Possible](#) - Prerequisite

Smart Release Technology product packaging is 100% recyclable, reducing landfill waste.

[Credit Category](#) - Solid Waste Management

[Points Possible](#) - 2

Indoor Environmental Quality

Smart Release non-oxidizing biocide (Bio-Clear) allows facilities to earn this credit because of the packaging of the product. Bio-Clear emits no harmful vapors and does not require dedicated exhaust ventilation.
