

# SMART RELEASE TECHNOLOGY HELPS YOU GO GREEN

## EARN LEED POINTS WITH SMART RELEASE

### ELIMINATE DISCHARGE OF HARMFUL CHEMICALS

Many liquid products have multiple ingredient components that are not compatible for one reason or another. Liquid products will typically include surfactants, alcohols, glycols or other materials, to assist in stabilizing formulas, prevent separation, and lower the freeze point.

When you use a powdered product that is fully dissolvable as Smart Release products are, we don't add any of these other ingredients in our formulas. That's why we can claim at least 97% active with no harmful chemical discharge.

### REDUCE WATER USAGE

Good treatment allows for higher cycles of concentration. This in turn lowers water usage.

Smart Release uses robust and proven chemistries to do just that.

### LOWER CO2

Smart Release products are delivered in recyclable cardboard boxes. The highly active concentration reduces shipping weight, thus lowering CO2 emissions.

### NO CHEMICAL DELIVERY PUMPS

The only pump you will find on the SRG2 system is a three-speed, recirculating pump featuring a cast iron housing and removable check valve.
